Overview

VHCL is a set of libraries that provide cross-platform common functionality for C/C++ projects.

VHCL includes:

- Platform detection and defines
- File logging
- Memory tracking and leak detection
- Crash reporting
- OpenAL audio interface
- Helpful string functions
- Efficient Assert() function
- High Resolution Timer
- Math library
- Socket/Winsock wrapper

Quick facts:

- Location: https://svn.ict.usc.edu/svn_vh/trunk/.
- Project location(s): trunk/lib/vhcl
- Main developer: Ed Fast

Developers

Formatting Arguments into a String

Use the Format function inside of `vhcl_string.h`.

Using TCP Sockets

The `vhcl_socket` class handles cross-platform TCP socket creation and usage.

Message API

Sends: None

Receives: None
